

# Thrombosis in the UK & Europe

**1 in 4** people worldwide are dying from conditions caused by thrombosis<sup>1</sup>.

This is **greater** than the total number of people who lose their lives each year to AIDS, breast cancer, and motor vehicle crashes combined<sup>2</sup>.

In Europe, there are more than **500,000** venous thromboembolism - related deaths every year<sup>2</sup>.

Research suggests that venous thromboembolism is often **preventable**<sup>1</sup>.

**Over 90%** of all inpatients admitted to NHS funded acute care hospitals are assessed for VTE risk in the UK<sup>3</sup>.

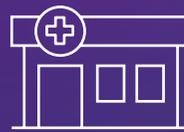

In the UK, **VTE Exemplar Centres** were created to **recognise excellence** in prevention care and encourage **leadership** and **innovation** in the field<sup>4</sup>.

Our portfolio consists of well-established injectable anticoagulants. All prefilled syringes are made and filled by Viatris' partner in France, EU.

**97%** participation of all colleagues globally engaged on **diversity, equity and inclusion** (DEI) learning<sup>5</sup>.

Our goal is to give patients access to high-quality antithrombotic medicines, making our contribution to **diminish preventable suffering or death due to thromboembolism.**
